

## ABET LAMINATI COLOURS AND TECNOLOGY CHANGE THE SCHOOL OF BAD SALZUNGEN INTO A WONDERFUL RAINBOW

Located in Bad Salzungen, in the heart of Germany, the Kindertagesstätte school changes its look thanks to the rich and wide range of colours offered by ABET LAMINATI.

Revised by the designer and architect Jens Thasler, the external facades of the buildings focus on the colours that make them bright rainbows.

The facades have been totally covered with different shades of the ABET LAMINATI MEG 8 mm in digital print, self-supporting high pressure laminate, a good alternative for the realization of ventilated facades.

Jens Thasler, who considers architecture and design as a synergic combination of expression and contents, works with the intention of harmonizing the huge building with the surrounding environment. Supported by the technical performance of the laminate, Thasler has efficiently played with colour systems and sequences: rounded smooth shapes and bright colours successfully hide the old DDR style of the building.

ABET LAMINATI, which has always been reliable partner of the most demanding designers, has offered also laminates of the Colours series for the internal covering of desks, cupboards, benches and washing stands.

## MEG

MEG is a self-supporting high pressure laminate (HPL) with a decorative surface that is suitable for exteriors.
